Error Messages

This subsection covers the following topics:

- Where Error Messages Are Written to
- Language of the Error Messages

Where Error Messages Are Written to

Entire Operations displays error messages at the following locations:

Location	Description
On the current screen	If Entire Operations is used online. In many cases, additional error information is written to the "Entire Operations log". Subsequent to more complex errors it is recommended to have a look there. For more information, see Log Information.
List of the active jobs, Message column	Contains the last status message or error message for the active job.
Entire Operations Log	Contains all status messages and error messages. If database problems prevent you from writing to the log file, then the messages will be written to the sysout of the monitor tasks.
Monitor tasks sysout	Contains mainly start and end messages of the monitor tasks. In this case, some other important events are also logged in addition.
Console	On mainframes, weighty messages of the monitor tasks are written to the System console. In most cases, they are to be answered by the operator. An example of this is the non-availability of the database, while the Entire Operations monitor is running.

Language of the Error Messages

In Entire Operations, the languages English and German are available.

Location	Description
On the current screen	The language which is defined in the user profile (see the subsection Entire Operations Defaults in the section System Administrator Services of the Entire Operations Administration Documentation).
List of the active jobs, Message column)	The language which is defined in the user profile (see the subsection Entire Operations Defaults in the section System Administrator Services of the Entire Operations Administration Documentation).
Entire Operations Log	The language which is defined in the user profile (see the subsection Entire Operations Defaults in the section System Administrator Services of the Entire Operations Administration Documentation). Log messages are saved independent of the language. Each user can have them displayed in his or her own language.
Monitor tasks sysout	Depends upon the Natural environment language of the Entire Operations monitor. This language can be set using the Natural parameter ULANG for instance.
Console	Depends upon the Natural environment language of the Entire Operations monitor. This language can be set using the Natural parameter ULANG.
